## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **LISTING OF CLAIMS:**

1. (Currently Amended) A <u>powdered</u> pharmaceutical composition <u>for</u> <u>treating asthma bronchiale in mammals, comprising:</u> [[, ]]

separately or together,

an efficacious amount of (i) loteprednol or loteprednol etabonate; and (ii) at least one  $\beta_2$  adrenoreceptor agonist selected from the group consisting of salbutamol, reproterol, salmeterol, formoterol, and pharmaceutically tolerable salts there of,

for simultaneous, sequential, or separate administration by inhalation in the treatment of asthma bronchiale in mammals, wherein the pharmaceutical composition is formulated in a powdered form.

- 2. (Currently Amended) The <u>powdered</u> pharmaceutical composition according to claim 1, comprising:
  - (i) loteprednol or loteprednol etabonate; and
  - (ii) formoterol.
- 3. (Currently Amended) The <u>powdered</u> pharmaceutical composition according to claim 1, comprising:
  - (i) loteprednol or loteprednol etabonate; and
  - (ii) salmeterol.
- 4. (Currently Amended) The <u>powdered</u> pharmaceutical composition according to claim 1, comprising:
  - (i) loteprednol or loteprednol etabonate; and
  - (ii) reproterol.
  - 5. (Canceled).

- 6. (Canceled).
- 7. (Currently Amended) A method for the treatment of asthma bronchiale <u>in a patient</u>, <u>the method</u> comprising:

administering to a-the patient in need of such treatment an efficacious amount of (i) loteprednol or loteprednol etabonate and (ii) at least one  $\beta_2$  adrenoceptor agonist selected from the group consisting of salbutamol, reproterol, salmeterol, formoterol, and pharmaceutically tolerable salts there of,

if appropriate together with

wherein a pharmaceutically acceptable excipient or a vehicle is added if suitable excipients or vehicles, for simultaneous, sequential or separate administration.

8. (Currently Amended) A process for the preparation of a pharmaceutical composition for the treatment of asthma bronchiale, the process comprising:

combining (i) an effective amount of the active compound loteprednol or loteprednol etabonate and (ii) an effective amount of at least one  $\beta_2$  adrenoceptor agonist selected from the group consisting of salbutamol, reproterol, salmeterol, formoterol, and pharmaceutically tolerable salts there of,

wherein <u>the</u> loteprednol or loteprednol etabonate and <del>the  $\beta_2$  adrenoceptor</del> agonist or the <u>one or more</u>  $\beta_2$  adrenoceptor agonists are mixed individually or together,

if appropriate together with

wherein a pharmaceutically acceptable excipient or a vehicle is added if suitable, excipients or vehicles, and

<u>wherein</u> the <u>mixture-composition</u> thus obtained is converted into <u>suitable a</u> <u>powdered administration forms form suitable for inhalations</u>.
